

LabTech
in your life

*The everyday places and spaces
where you find and interact with
federal technology!*

LABTECH IN YOUR LIFE IS A VIRTUAL EXPERIENCE THAT SHOWCASES COMMONLY USED, EVERYDAY TECHNOLOGIES THAT WERE ORIGINALLY DEVELOPED INSIDE A FEDERAL LABORATORY.

WHAT IS LABTECH IN YOUR LIFE?

Created by the Federal Laboratory Consortium for Technology Transfer (FLC), LabTech in Your Life is a unique interactive experience designed to connect you with the innovative research and development (R&D) of federal agencies and laboratories that has achieved significant commercial marketplace success.

LABTECH AT HOME

LabTech at Home is the first virtual environment of LabTech in Your Life. You can explore the familiar setting of a home and discover successfully commercialized federal technologies that are now commonly used household items.

WHAT YOU'LL DISCOVER

You'll find technologies on full display—from Army-developed mosquito traps to the NASA-invented memory foam mattress you sleep on. Each technology represents years of federal laboratory R&D and demonstrates successful technology transfer (T2) partnerships in a wide range of scientific areas.

FINDING INNOVATION SUCCESS

The technologies that you'll encounter throughout LabTech at Home took several years to develop and were designed to meet a public need recognized by the U.S. government. Thanks to the collaborative efforts of interested business partners and further R&D applications, these technologies reached commercial market success through a process called "technology transfer."

WHAT IS TECHNOLOGY TRANSFER?

Simply put, technology transfer is the process by which federally developed technologies, methods, or ideas are accelerated from the laboratory to the marketplace thanks to collaborative partnerships, agreements, and licensing between federal labs and industry.

Discover how the technologies you use every day made their way to the marketplace and into your life!
